

## For most types of ovens, grills, pans and BBQs

### TO USE:

- Shake the bottle and apply to the surface to be cleaned using the round bristle brush.
- Spread thinly and evenly on lightly marked areas, thicker on those parts with a heavy build-up. As a guide, apply a layer of gel equal to the amount of residue to be removed.
- Leave the gel to work. It will turn brown as it cleans. This may take a few minutes or up to three hours. To deep clean a particularly dirty oven, leave on overnight.
- Remove the brown gel with kitchen roll, then wipe over with a sponge to remove all traces.
- The small stiff brush is for use on the racks where a little brushing may be required to remove all burnt on residue from the wires.

### TAKE CARE:

- Apply to a cold oven only.
- Do not use on self-clean ovens.
- Do not allow gel applied to the oven door glass to touch the door seals.
- Take care to avoid the gel getting on to any other surface whilst applying.
- Do not use on aluminium, brass, copper, Teflon coated, painted or anodised surfaces.
- Do not use on surfaces previously cleaned with strong acid-based cleaners.
- Always use gloves when applying or removing the gel.

Refer to the manufacturer's handbook for cleaning instructions.

Use within 24 months of opening
