

IMPORTANT!

Be sure to follow the steps below when emptying your dirty water tank to ensure that your SpotClean functions correctly. If these steps are not followed properly, your SpotClean may lose vacuum function or leak dirty water from the bottom of the unit.

1. Empty dirty water through the pour spout located at the top of the tank. Be sure the rubber stopper is fully inserted back into the pour spout when finished.

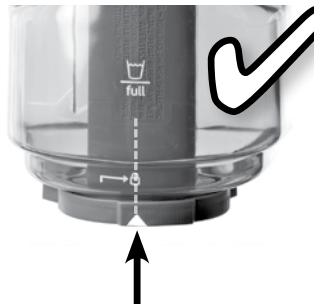

sealed tightly

loose seal with gap

2. If you have removed the float stack, **be sure to insert it back into the bottom of the dirty water tank correctly by lining up the arrow on the cap with the line on the bottom of the tank and turning clockwise until the arrow lines up with the lock symbol on the bottom of the tank.**

3. Be sure that the duck bill valve located at the bottom of float stack is clean and tightly inserted.

missing

4. Be sure to sit the dirty water tank back onto the unit in the correct position. It should fit securely without rocking back and forth.

snug fit
