

Water Softener produces approximately 10 litres of demineralised water helping to prevent limescale build up.

The quantity of tap water treated is dependant on water hardness and may vary considerably.

Directions:

1. Unscrew lid and fill with cold tap water to bottle shoulder.
2. Replace cap and gently agitate the bottle with a rocking motion, for approximately 1 minute.
3. Flip open the pouring nozzle and fill the appliance as per the manufacturers guidelines.
4. Repeat as necessary until the crystals in the bottle turn red (demineralised water can be stored in the bottle).
5. When finished the crystals and bottle can be disposed of in the household waste.

The bottle is finished when the crystals turn red.

Once exhausted (turned red), crystals can emptied from bottle and disposed of as normal household waste.

WARNING

Causes serious eye irritation.

IF IN EYES: rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do so. Continue rinsing.

If eye irritation persists, get medical advice/attention.

KEEP OUT OF REACH OF CHILDREN.

Wash hands thoroughly if come into contact with crystals.

Chemical information refers to the crystals not the demineralised water.

We'd love to hear from you.
